

Helensville

Prioritisation: low (1)

Population*

4,177

Growth forecast*

By 2058,
population
is expected
to grow to
4,862

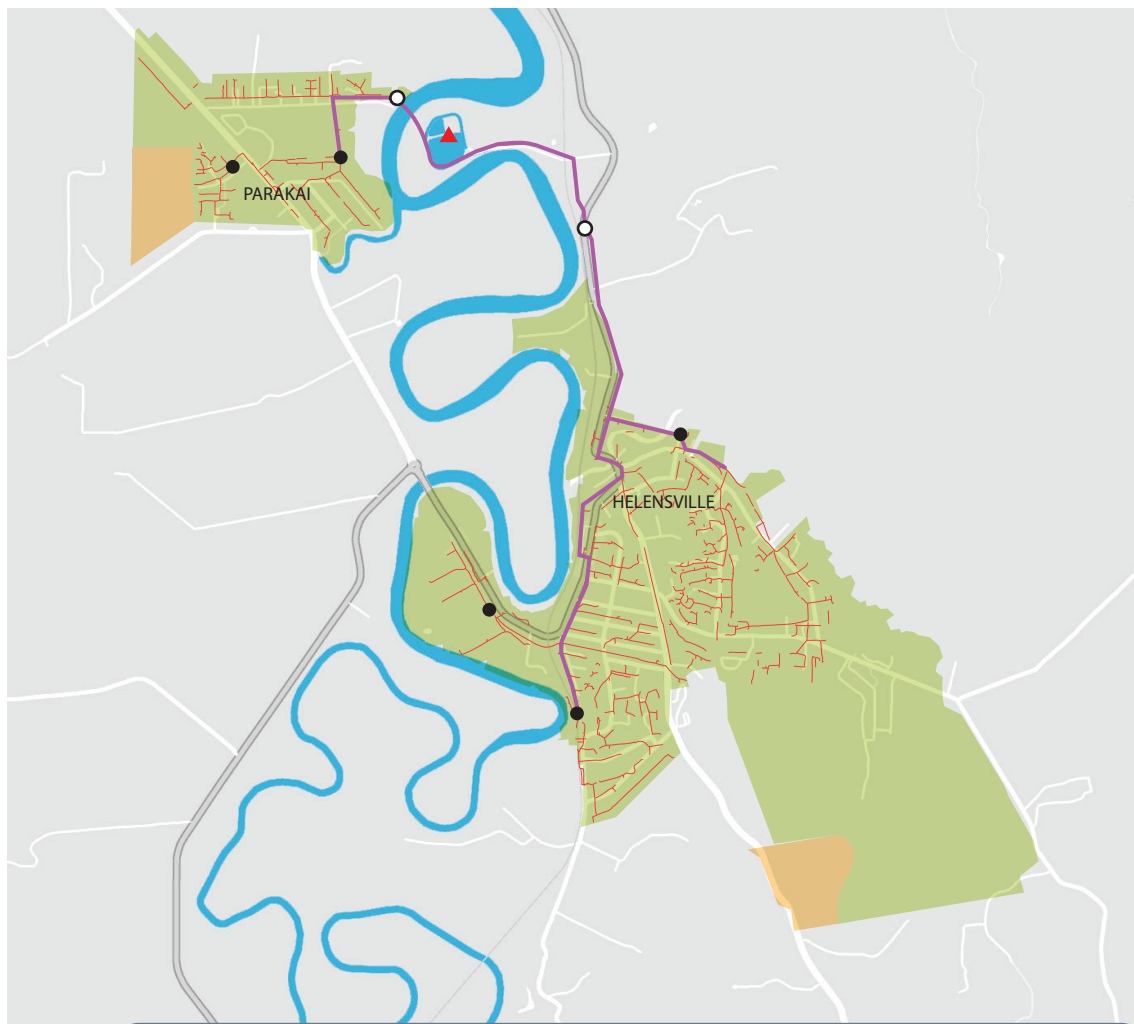

Helensville catchment is situated on the banks of the Kaipara River. The Kaipara Harbour remains an important source of food and recreation for Mana Whenua and is central to Ngati Whatua identity.

While there are a number of developments in this catchment, there are uncertainties in the scale, location and timing of growth in Helensville. Therefore, we will continue to monitor growth in this area.

There will be no major proposed work over the next six years.

We will continue to maintain the network through renewal programmes, repairing ageing infrastructure and carrying out investigation works such as Inflow and Infiltration.

KEY

● Type 1 engineered overflow point

○ Type 1 engineered overflow point (separate consent)

▲ Treatment plant

— Local network pipe

— Transmission pipe

Existing urban area

Future urban area

* **Population:** is an estimate of the population of Watercare customers in the catchment area.

* **Growth forecast:** population data is provided by Auckland Council and based on the latest projected information, which means that the forecasted dates may vary.
